

### **Traffic information Covid -19**

Since yesterday, several countries have chosen to close a number of borders for lorry traffic in order to concentrate border crossings to a few in the country, in order to allow the country's resources to control the health condition of the drivers and others crossing the borders.

Our vehicles continue to go into the countries where MTS is operating in with some delays, due to longer distances to approved border crossing and because of this queues occur at these border stations. For example, Hungary currently has only 2 border crossings open to Slovakia, which causes major detours for vehicles coming from or going south. Also many boundaries SK / CZ and CZ / PL have been closed down for lorry traffic.

The biggest problem right now is Croatia where different information about transport in and out of the country flourishes, we are trying to confirm what really applies. At the moment we do not enter Croatia. See updates on our website.

Against this background, the transport and logistics industry is in a force majeure state (Confirmed by authorities in several countries).

So far our capacity is good, but we now see that extra costs in carrying out the transport are unavoidable and above all extra costs that arise when one cannot always cross the nearest border in the loading country / transit country / unloading country.

We would like to draw your attention to the fact that we will have to charge our customers some of these extra costs.

This applies at the current situation but changes occur daily, hour by hour. We will update our website, [www.mts-malmo.se](http://www.mts-malmo.se), on developments that affect our customers.

The above applies from today until further notice.

Kind regards

MTS
